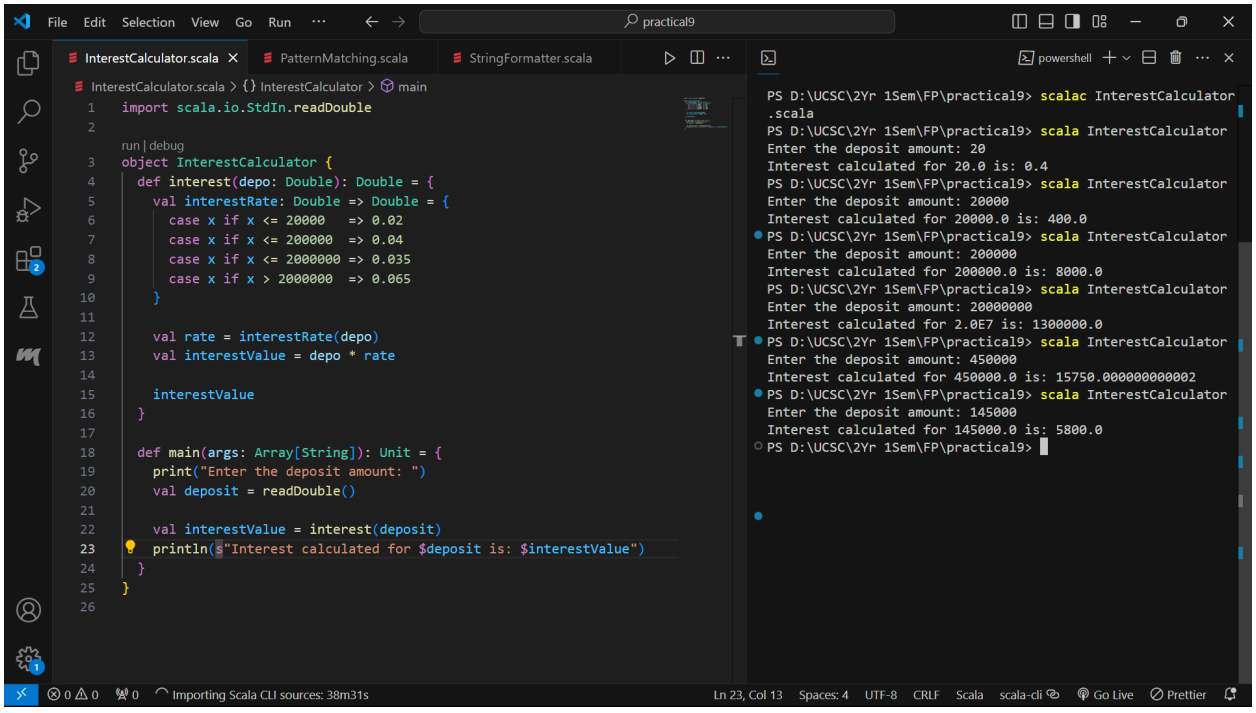
Practical 09 - 22001956

Question 01



```scala
import scala.io.StdIn.readDouble

run | debug
object InterestCalculator {
  def interest(depo: Double): Double = {
    val interestRate: Double => Double = {
      case x if x <= 20000   => 0.02
      case x if x <= 200000  => 0.04
      case x if x <= 2000000 => 0.035
      case x if x > 2000000  => 0.065
    }

    val rate = interestRate(depo)
    val interestValue = depo * rate

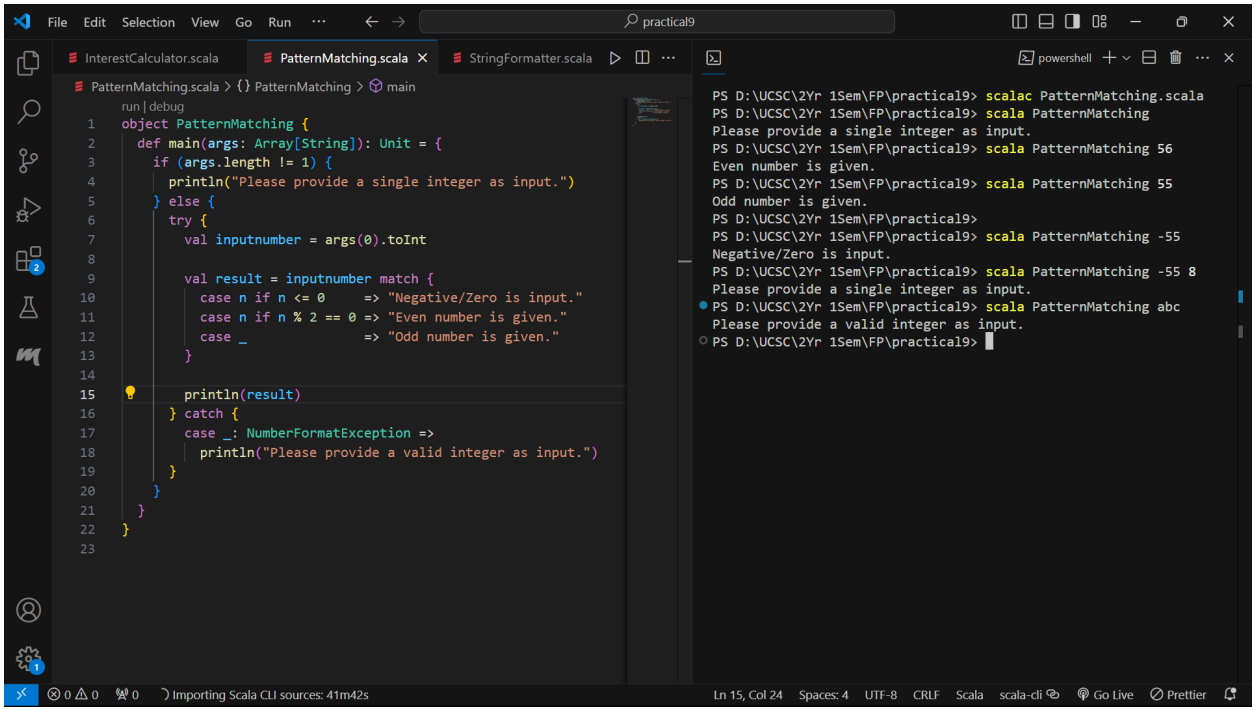
    interestValue
  }

  def main(args: Array[String]): Unit = {
    print("Enter the deposit amount: ")
    val deposit = readDouble()

    val interestValue = interest(deposit)
    println(s"Interest calculated for $deposit is: $interestValue")
  }
}
```

```
PS D:\UCSC\2Yr 1Sem\FP\practical9> scalac InterestCalculator
.scala
PS D:\UCSC\2Yr 1Sem\FP\practical9> scala InterestCalculator
Enter the deposit amount: 20
Interest calculated for 20.0 is: 0.4
PS D:\UCSC\2Yr 1Sem\FP\practical9> scala InterestCalculator
Enter the deposit amount: 20000
Interest calculated for 20000.0 is: 400.0
PS D:\UCSC\2Yr 1Sem\FP\practical9> scala InterestCalculator
Enter the deposit amount: 200000
Interest calculated for 200000.0 is: 8000.0
PS D:\UCSC\2Yr 1Sem\FP\practical9> scala InterestCalculator
Enter the deposit amount: 20000000
Interest calculated for 2.0E7 is: 1300000.0
PS D:\UCSC\2Yr 1Sem\FP\practical9> scala InterestCalculator
Enter the deposit amount: 450000
Interest calculated for 450000.0 is: 15750.000000000002
PS D:\UCSC\2Yr 1Sem\FP\practical9> scala InterestCalculator
Enter the deposit amount: 145000
Interest calculated for 145000.0 is: 5800.0
PS D:\UCSC\2Yr 1Sem\FP\practical9>
```

Question 02



```scala
run | debug
object PatternMatching {
  def main(args: Array[String]): Unit = {
    if (args.length != 1) {
      println("Please provide a single integer as input.")
    } else {
      try {
        val inputnumber = args(0).toInt

        val result = inputnumber match {
          case n if n <= 0     => "Negative/Zero is input."
          case n if n % 2 == 0 => "Even number is given."
          case _               => "Odd number is given."
        }

        println(result)
      } catch {
        case _: NumberFormatException =>
          println("Please provide a valid integer as input.")
      }
    }
  }
}
```

```
PS D:\UCSC\2Yr 1Sem\FP\practical9> scalac PatternMatching.scala
PS D:\UCSC\2Yr 1Sem\FP\practical9> scala PatternMatching
Please provide a single integer as input.
PS D:\UCSC\2Yr 1Sem\FP\practical9> scala PatternMatching 56
Even number is given.
PS D:\UCSC\2Yr 1Sem\FP\practical9> scala PatternMatching 55
Odd number is given.
PS D:\UCSC\2Yr 1Sem\FP\practical9>
PS D:\UCSC\2Yr 1Sem\FP\practical9> scala PatternMatching -55
Negative/Zero is input.
PS D:\UCSC\2Yr 1Sem\FP\practical9> scala PatternMatching -55 8
Please provide a single integer as input.
PS D:\UCSC\2Yr 1Sem\FP\practical9> scala PatternMatching abc
Please provide a valid integer as input.
PS D:\UCSC\2Yr 1Sem\FP\practical9>
```
